

FACT SHEET

Utilising Computershare's Global Register™ solution and common technology platform to deliver rapid cross-border settlement.

A web-based service, xSettle leverages Computershare's global technology capability and close links to local central clearing houses (such as DTCC, CDS, CREST, CHES, STRATE, CCASS and FASTER) to accelerate the transfer of securities between markets.

With xSettle, market participants can meet their settlement deadlines and gain advantage in conducting international trade.

Part of the Global Register™ solution, xSettle interlocks with Computershare's extensive portfolio of issuer services and is strategically aligned to meet all cross-border requirements.

SPEED AND EFFICIENCY

Backed by our global technology platform and direct linkages to markets, brokers and market participants can efficiently meet their settlement deadlines, wherever and whenever the need arises.

COST EFFECTIVE

Our global connectivity and streamlined processes help intermediaries avoid costly penalties and charges from settlement failures. Our cross-border fees are a fraction of those of an ADR Depository Bank offering similar services.

MITIGATE RISK

Our end-to-end capability removes the risk of not having securities to settle trades on settlement date. In many markets, securities are delivered directly to your nominated counter party.

ARBITRAGE OPPORTUNITIES

Computershare is unique in having the ability to settle trades across two or more markets concurrently.

CROSS-BORDER EXPERTISE

Coupled with the establishment of our Global Transactions Unit, xSettle leverages Computershare's global presence and cross-border expertise to provide an unparalleled service to issuers and brokers.

THE GLOBAL REGISTER > SUPPORTING THE XSETTLE WEB SERVICE

WHAT IS THE GLOBAL REGISTER?

As our clients have globalised and sought access to capital from markets around the world, we have developed a global platform to enable a consistent level of service to investors and issuers alike. This is known as the Global Register.

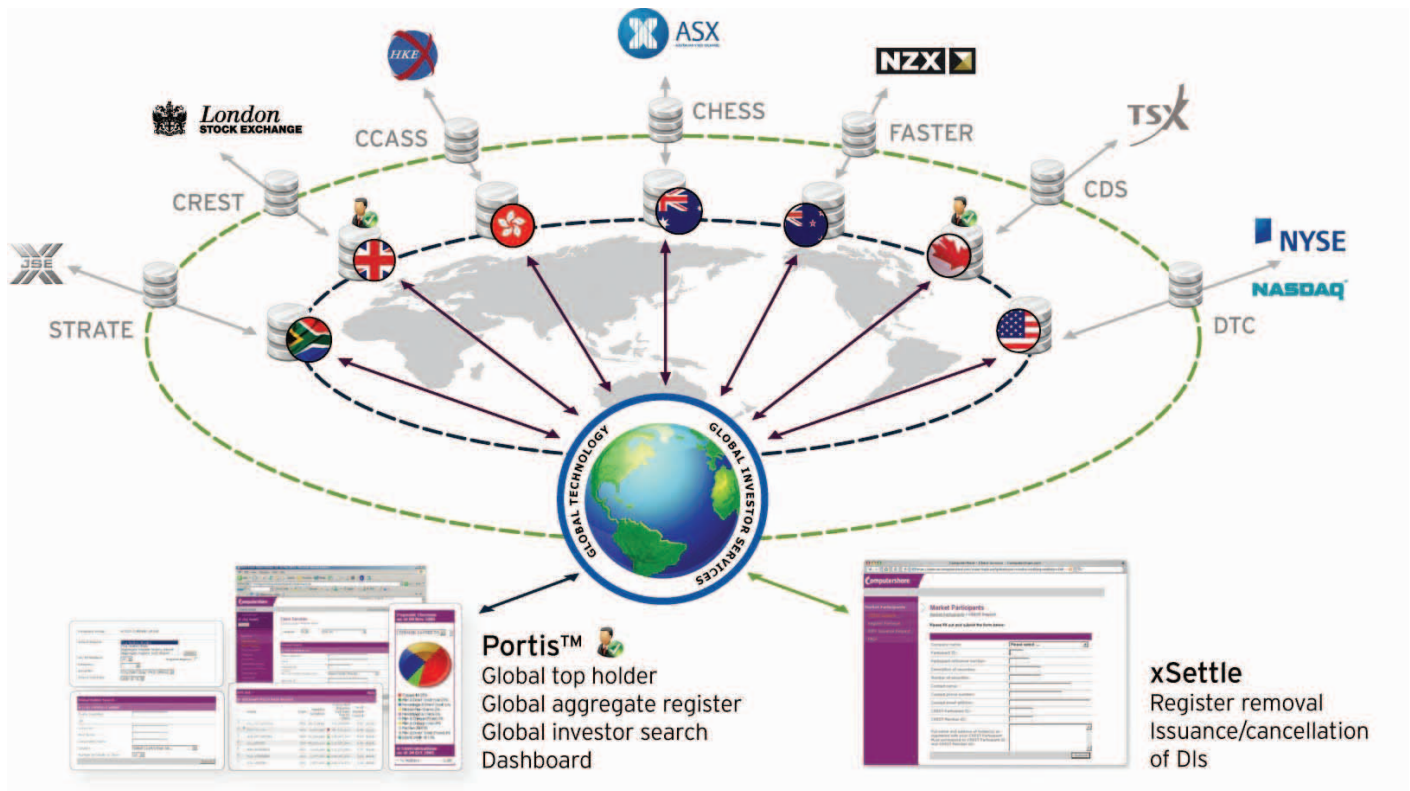

The Global Register provides an integrated registration service spanning multiple jurisdictions, generally encompassing two or more major time zones.

With interlocking components, including Depository Interest and our Portis and xSettle web services, our solution can be streamlined and managed from the country in which you are headquartered.

Our global capabilities enable our clients to benefit from fully customised solutions - even in markets where Computershare does not have a physical presence. These solutions may include equity plans, proxy solicitation, AGM logistics and specialist communication programmes.

BENEFITS OF THE GLOBAL REGISTER

- > Increased convenience and transparency
- > Mitigation of risk through our integrated services
- > Improved transaction processing time and efficiencies
- > Consolidated administration, reporting and analysis gives accurate 'at a glance' information
- > Single point of access to all registers and custodian positions makes monitoring easy
- > Global relationship management and local service support.

Our Global Register solution can link two or more markets, such as LSE and TSX; xSettle enables the rapid movement of securities between markets, often within hours.
