

## The easy way to search for Investor Information

InSearch is an innovative new service, designed to address the needs of the broker and intermediary market.

It allows regulated firms to check investor information prior to settlement instructions being passed to Computershare.

By confirming the information is correct, inSearch assists the quick and efficient settlement of trades, reducing the risk of transactions being rejected by the Registrar.

### SEARCHABLE DATABASE

InSearch is the first bespoke online register search service for brokers. The first release of InSearch allows quick and easy access to the register of members and certificate validation. Future enhancements are already being discussed with industry participants. The database is fully searchable by Company, ISIN, Shareholder Reference Number, Investor Name and Address.

### TRANSPARENT PRICING

InSearch gives users the option to replace the current premium rate telephone service with web access and a dedicated telephone number for your firm. Telephone calls are charged at talk time only and you will receive monthly invoicing containing your call usage.

### UNLIMITED ACCESS

This new service provides you with 24-hour access, seven days a week. You can access the system at your convenience, rather than having to rely on phone lines being open. It is fast and efficient, as we know you need register information at your finger tips. To join, visit [www.insearchonline.co.uk](http://www.insearchonline.co.uk) and complete a simple subscription form.
